WP-CLI Cheat Sheet

WP-CLI is the command-line interface for WordPress. You can update plugins, configure multisite installations and much more, without using a web browser.

Download WordPress

```
wp core download
```

Generate wp-config.php file.

```
wp core config --dbname=<dbname>  
--dbuser=<dbuser> --dbpass=<dbpass>  
--dbprefix=<dbprefix>
```

Install WordPress

```
wp core install --url="your_domain_name"  
--title="Your Blog Title" --admin_user="admin"  
--admin_password="your_password"  
--admin_email="your_email"
```

Search plugin

```
wp plugin search yoast
```

Install plugin

```
wp plugin install pluginname
```

List plugins

```
wp plugin list
```

List installed themes

```
wp theme list
```

Search for new themes

```
wp theme search keyword
```

Install theme

```
wp theme install bootstrap-four
```

Activate theme

```
wp theme activate bootstrap-four
```

List posts

```
wp post list
```

Edit post

```
wp post edit 1
```

Post update

```
wp post update 1  
--post_title="Your New title..."
```

Create posts

```
wp post create  
--post_status=publish  
--post_title="Second Post"  
--edit
```

Login WordPress db

```
wp db cli
```

List WordPress users

```
wp db query "SELECT user_login, ID FROM wp_users;"
```

Change WordPress post author

```
wp post update 6 --post_author=1
```

Optimize db

```
wp db optimize
```

Update WordPress

```
wp core update
```

Update WordPress DB

```
wp core update-db
```

Update all plugins

```
wp plugin update --all
```

WordPress Themes Development Cheat Sheet

WordPress Theme Definition

Your theme's information is stored in the theme's main style.css file. The information is displayed when you view your theme on Appearance > Themes or on WordPress' theme repository (if it's submitted and approved).

```
/*
Theme Name: Twenty Seventeen
Theme URI: https://WordPress.org/themes/twentyseventeen/ Author: the
WordPress team
Author URI: https://WordPress.org/
Description: Twenty Seventeen brings your site to life with immersive
featured images and subtle animations. With a focus on business
sites, it features multiple sections on the front page as well as
widgets, navigation and social menus, a logo, and more. Personalize
its asymmetrical grid with a custom color scheme and showcase your
multimedia content with post formats. Our default theme for 2017 works
great in many languages, for any abilities, and on any device.
Version: 1.0
License: GNU General Public License v2 or later License URI: http://www.
gnu.org/licenses/gpl-2.0.html Text Domain: twentyseventeen
Tags: one-column, two-columns, right-sidebar, flexible-header,
accessibility-ready, custom-colors, custom-header, custom-menu,
custom-logo, editor-style, featured-images, footer-widgets, post-
formats, rtl-language-support, sticky-post, theme-options, threaded-
comments, translation-ready

This theme, like WordPress, is licensed under the GPL.
Use it to make something cool, have fun, and share what you've learned
with others.
*/
```

WordPress Template Files

Basic files every WordPress theme should have:

```
style.css           // Theme's main stylesheet file
index.php           // Main template file
single.php          // Single post file.
                    // ..Used for to display single posts only
archive.php         // Archive or Category template file
searchform.php      // Search form file
search.php          // Search results file
404.php             // 404 error page file.
                    // ..Will be displayed if no page can be found.
comments.php        // Comments template file
footer.php          // Footer content file
header.php          // Header content file
sidebar.php         // Sidebar content file
page.php            // Single page file. Used for pages only.
```

WordPress Template Anatomy

header.php

```
get_header();
wp_nav_menu(); //(registered in functions.php)
get_search_form();
```

The Loop

```
index.php
home.php
archive.php
page.php
single.php
comments_template();
search.php
author.php
404.php
```

sidebar.php

```
get_sidebar()
```

footer.php

```
get_footer()
```

Not Displayed

```
style.css           // Theme style
functions.php       // Theme functions
comments.php        // Comments template
```

WordPress Template Tags

Template tags are used within themes to retrieve content from your database. The content could be anything from a blog title to a complete sidebar. Template tags are the preferred method to pull content into your theme because: they can print dynamic content; they can be used in multiple theme files; and they separate the theme into smaller, more understandable, sections.

```
the_content()
the_excerpt()
the_title()
the_permalink()
the_category( ' ', ' ' )
the_author()
the_ID()
edit_post_link()
next_post_link( '%link' )
previous_post_link( '%link' )
get_links_list()
wp_list_pages()
wp_get_archives()
wp_list_cats()
get_calendar()
wp_register()
wp_loginout()
```

Get post content

Get the post excerpt

Get the title of the post

Display post link

Display category of a post

Show post author

Display post ID

Show Edit link for a post

Display next page URL

Display previous page URL

Retrieve blogroll links

Retrieve all pages

Retrieve archive for the site

Retrieve all categories

Show the built-in WordPress calendar

Show register link

Displays login or logout links (for registered users)

Include Tags

Use these tags to include templates to your theme.

```
<?php get_header(); ?>
```

Includes header.php and display its content

```
<?php get_sidebar(); ?>
```

Includes sidebar.php

```
<?php get_footer(); ?>
```

Includes the footer.php

```
<?php comments_template(); ?>
```

Load specific template for comments

Useful Header Functions

```
site_url()
```

Get WordPress site url

```
wp_title()
```

Get page title

```
bloginfo('name')
```

Get blog name

```
bloginfo('description')
```

Get blog description

```
get_stylesheet_directory_uri()
```

Get stylesheet directory URI

```
bloginfo('atom_rul')
```

Get Atom feed URL

```
bloginfo('rss2_url')
```

RSS 2.0 URL

The Loop

The Loop is the default mechanism WordPress uses for outputting posts through a theme's template files.

```
<?php if ( have_posts() ) : ?>
    <?php while ( have_posts() ) : the_post(); ?>
        // Display post content
    <?php endwhile; ?>
<?php endif; ?>
```

WordPress Menu and Sidebars

Default Navigation Menu

```
<?php wp_nav_menu(); ?>
```

Specific Navigation Menu

```
<?php wp_nav_menu( array( 'menu' => My Navigation' )); ?>
```

Category Based Navigation

```
<ul id="menu">
  <li <?php if(is_home()) { ?> class="current-cat" <?php } ?>>
    <a href="<?php bloginfo('home'); ?>">Home</a>
  </li>
  <?php wp_list_categories('title_li=&orderby=id');?>
</ul>
```

Page Based Navigation

```
<ul id="menu">
  <li <?php if(is_home()) { ?> class="current-cat" <?php } ?>>
    <a href="<?php bloginfo('home'); ?>">Home</a>
  </li>
  <?php wp_list_categories('title_li=&orderby=id');?>
</ul>
```

Registering New Sidebar

Add the following code to your functions.php file to register a new sidebar.

```
add_action( 'widgets_init', 'theme_slug_widgets_init' );
function theme_slug_widgets_init() {
    register_sidebar( array(
        'name' =>_( 'My Sidebar', 'theme-slug' ),
        'id' => 'sidebar-1',
        'description' =>_( 'Description', 'theme-slug' ),
        'before_widget' => '<li id="%1$s" class="widget %2$s">',
        'after_widget' => '</li>',
        'before_title' => '<h2 class="widgettitle">',
        'after_title' => '</h2>',
    ));
}
```

WordPress Keyboard Shortcuts

Alt + **Shift** + **Key**

Windows/Linux: “Alt + Shift + Key”.

Mac: “Ctrl + Option (alt) + Key”. (WordPress 4.2 below use “Alt + Shift + Key”).

n	Check Spelling (This requires a plugin.)
l	Align Left
j	Justify Text
